

This is false. Consider a graph with nodes  $s, v_1, v_2, v_3, w, t$ , edges  $(s, v_i)$  and  $(v_i, w)$  for each  $i$ , and an edge  $(w, t)$ . There is a capacity of 4 on edge  $(w, t)$ , and a capacity of 1 on all other edges. Then setting  $A = \{s\}$  and  $B = V - A$  gives a minimum cut, with capacity 3. But if we add one to every edge then this cut has capacity 6, more than the capacity of 5 on the cut with  $B = \{t\}$  and  $A = V - B$ .
